FOR KETAMINE AND PSYCHEDELIC-ASSISTED THERAPY CLINICS

# SomaCheck carries your care into the weeks between sessions.

An iPhone app for your patients.

- **World-class integration, between every session.** Over 30 years of plant medicine and integration leadership, including some of the most advanced integration protocols available today
- **A phone-based biomarker for integration.** A three-second check-in shows how each patient's body is responding, against their own baseline. No questionnaire, no wearable
- **A reason to come back.** With your patient's consent, what they choose to share flows back to you, so the next session starts where the last one landed

THE INTEGRATION PRACTITIONERS

## Integration that usually costs $250,000 a year. Now in your patients' pocket.

**Satyen Raja**
FOUNDER, WARRIORSAGE · ASPECTICS

**30+**
years hosting plant medicine and integration work

**$250k**
a year to join his private program

IN THE APP NOW

For more than 30 years, Satyen Raja has hosted plant medicine and integration work for some of the world's most demanding leaders, founders, and executives. A place in his private program costs about **$250,000 a year**.

**Those integration techniques are now digitized and inside SomaCheck.** Aspectics, Satyen's integration protocol, is guided by an AI voice built with Satyen himself, so your patients can work with what surfaced on the day it surfaces, not two weeks later at their next appointment.

For cravings, anxiety, self-criticism, and the states that reassert themselves after a session, Aspectics works through integration and the cultivation of wisdom, not suppression.

### Protocols created by leading MDs and PhDs in psychology and healing.

**Guided Breathing**
CREATED BY EVA SELHUB, MD
IN THE APP NOW

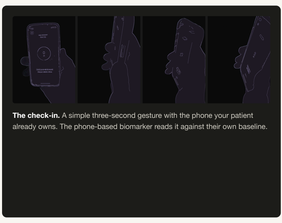

Dr. Selhub was an Instructor of Medicine at Harvard Medical School for 20 years and Medical Director of the Benson-Henry Institute for Mind Body Medicine at Mass General.

**HeartSpeak**
CREATED BY ANNE JENSEN, DPHIL
COMING SOON

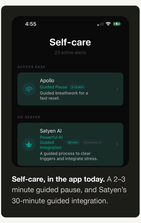

Dr. Jensen holds a doctorate in evidence-based health care from Oxford and has taught HeartSpeak in more than 12 countries. An adaptive protocol for integrating patterned behavior, clearing stuck, stressed, and frustrated emotions, working at the level of the feeling rather than the story about it.

INSIDE THE APP

## Three seconds to check in. Integration one tap away.

**The check-in.** A simple three-second gesture with the phone your patient already owns. The phone-based biomarker reads it against their own baseline.

**Self-care, in the app today.** A 2–3 minute guided pause, and Satyen's 30-minute guided integration.

ONE ARC OF CARE

## Before, during, and after the medicine.

PREPARATION

### Set, setting, intention

Patients check how their body responds to their own intention, and work with what's unaligned before the first dose. They enter clear and go deeper.

BEFORE · AT HOME

DOSING SESSION

### The medicine opens

Two to eight hours under your supervision. Your expertise, your protocol, your room.

DURING · IN CLINIC

INTEGRATION

### Where it lands, or leaks

Patients turn post-session openness into lasting change with biomarker check-ins and guided integration that helps them work through stress and build measurable resilience.

AFTER · BETWEEN SESSIONS

> Until now, integration ran on self-report: a questionnaire, filled in days later, filtered through exactly the narrative the medicine just loosened. SomaCheck reads the body instead.

OUR BET

## Bring back half the patients who drop off after induction.

**~47%**
of patients who finish induction never continue to maintenance.
McInnes et al., 2022, n = 9,016

**51–70%**
lower relapse risk for patients who stay on maintenance treatment.
SUSTAIN-1, Daly et al., 2019

**$7.2k–12.6k**
more lifetime revenue per maintenance patient than one who stops after induction.
Healing Maps 2026, industry estimate

**25** PILOT PATIENTS → **~12** WOULD DROP OFF → **6** BROUGHT BACK → **$43k–75k** LIFETIME REVENUE VS. A $2,500 PILOT

> Better for patients, better for the clinic.

REIMBURSEMENT

## Make the care visible. Make reimbursement easier.

SomaCheck captures timestamped check-ins, pre/post change, and engagement between visits.

| CODE | WHAT IT COVERS | DIRECTIONAL RATE | PER PATIENT / MONTH |
|---|---|---|---|
| 96127 | **Emotional check-in** Brief emotional/behavioral assessment, billed per scored, standardized instrument (such as PHQ-9 and GAD-7) at each treatment visit, up to 3 per day. | ~$5–15 / instrument | ~$100 2 per visit, active treatment |
| 99484 | **Behavioral health integration** Care management with 20+ minutes of clinical staff time a month, validated scales, and a care plan. | ~$53 / month | ~$53 once a month |

**Biofeedback (90901):** exploring in the pilot.

> Rates are directional national averages; SomaCheck supports documentation, and software use alone never establishes code eligibility. Insurance billing applies where your clinic bills payers, such as Spravato programs and psychiatric visits; IV ketamine is often self-pay. **Part of the pilot is finding out what your clinic can bill:** we work with your administrative and billing staff to test which of these services qualify for your patients and payers.

90-DAY FOUNDING PILOT

**$2,500**
PATIENTS INCLUDED

### Up to 25 active patients + 3 clinical users.

Includes white-glove onboarding, workflow design, agreed success metrics (led by your maintenance return rate against your own baseline), monthly operating reviews, documentation templates, and a clinic-specific outcomes report, and reimbursement exploration with your administrative staff. No setup fee. Decision at day 75: we review the agreed metrics together. Production pricing begins at day 91 unless you opt out by day 75, with founding rates held for 12 months.

| 83.6% | 3 sec | 18,000 | 9 | 2 | $0 |
|---|---|---|---|---|---|
| SIGNAL ACCURACY | CHECK-IN TIME | RESEARCH SESSIONS | RESEARCH TRIALS | PATENTS GRANTED | HARDWARE COST |

The founding cohort is intentionally limited.

**General wellness.** SomaCheck is a general wellness and care-support tool. It does not diagnose, treat, cure, or prevent any disease, and is not a substitute for medical advice, acute psychiatric care, or emergency services; each guided protocol carries a crisis branch. **Biomarker.** SomaCheck's phone-motion signal, read against each person's own baseline; not a diagnostic measure. Research on its relationship to integration is ongoing. **Practitioners.** Sessions use an AI voice and are not therapy. Aspectics and Guided Breathing are in the app now; HeartSpeak is coming soon. Satyen Raja's background and pricing as stated by Sensie and WarriorSage. **Our bet.** A pilot hypothesis, not a guarantee; no clinic has yet completed a pilot. Revenue figures are illustrative. Sources: McInnes et al. 2022; Daly et al., SUSTAIN-1, JAMA Psychiatry 2019; Healing Maps 2026 (publisher estimate). **Research.** 9 research trials, 18,000 sessions; results unpublished. 83.6% accuracy is against Sensie's internal benchmark. **Reimbursement.** Rates are directional national averages, not a forecast. 96127 is billed per standardized instrument, up to 3 units per day; the per-month figure assumes 2 instruments at each visit during active treatment (about 8 visits a month at Medicare to commercial rates) and falls during maintenance. SomaCheck use alone does not make a service reimbursable, and no claim has yet been adjudicated. The clinic is responsible for coding, documentation, and payer policy. **Pricing.** For proposal purposes, subject to written agreement. © 2026 Sensie, LLC. v6 · 2026-11-12.
